

# Twinfloor®

***The system mezzanine that offers you (financial) space.***

**Many warehouses are used inefficiently, because much of their storage space is considered too high to use. People say the warehouse is full, although many cubic meters of storage space remain empty.**

Our Twinfloor® puts an end to this situation. The costs are only a fraction of those of other solutions, such as alterations or building a new warehouse. Twinfloor® is a cleverly designed, flexible mezzanine, which is tailored to your needs.

Its unique beams make it possible to span wide areas up to 8 meters and it can carry loads up to 1500 kg/m<sup>2</sup>. If you decide to move? no problem. Twinfloor's® entire system can easily be reinstalled or extended. An investment in Twinfloor®, therefore will always remain profitable. All the more so because your storage space will now be recovered within approximately two years. So Twinfloor® offers you more financial space as well!
